

Solid Wood and Laminate Care

Nobis strongly recommend that all cleaning products which contain the following are not used on any product from the Nobis tabletop range:

- Abrasive
- Ammonia
- Bleach
- Spirit
- Any aggressive constituent, this also includes D10 sanitizers.

Please note that our product guarantee does not cover damage caused by the use of such cleaning products. We recommend that no cleaning products are to be used for cleaning Solid or Veneered Tabletops. On such products we would recommend the use of a warm, damp and slightly soapy cloth to wipe over. Do not use any spray cleaners as they can damage the protection of the lacquer finish. Do not use wax, as a build-up can occur and spoil the appearance of the finish. Once such products have been manufactured and installed, we advise that extra care is taken as the lacquer can take several days to become heatproof; and up to two weeks to become fully cured.

For this reason, we advise that all hot objects are to be placed on mats rather than the bare surface of the chosen table top. If upon delivery our Solid wood and Veneered products are to be put into storage, the environment they are to be stored in needs to be considered, especially during winter months. All products should be stored in temperatures of between 10-25°C, with the faces of the tops not exposed. We recommend wrapping in a warm blanket, and if possible, cover completely with plastic wrap or clingfilm.

ABS Edging

ABS edgings are easy to clean with a damp cloth soaked with soapy water, then wipe with a clean wet cloth containing no soap to remove any soap residue, before finally drying with a clean cotton or paper towel. For more stubborn marks use a commercially available cleaning agent that is suitable for plastic surfaces. To be safe, the suitability of the cleaner should be tested before use where possible

Laminate & Tuff Top MFC Tabletops

Simply wipe your Laminate or Tuff Top surface with a damp cloth soaked soapy water, then clean wet containing no soap to remove any residue, before finally drying cotton paper towel. Simply wipe your Laminate or Tuff Top surface with a damp cloth soaked soapy water, then clean wet containing no soap to remove any residue, before finally drying cotton paper towel. For stubborn marks, a careful application of non-abrasive cleaning solution can be used, but we recommend you test concealed area first where possible. For stubborn marks, follow these steps:

1. Spray the surface with a power all purpose cleaner or grease cleaner.
2. Allow the cleaner to work for a maximum of 5 minutes.
3. Take up/wipe off cleaner with a wet sponge cloth, rinse the cloth well clear water several times.
4. Afterwards, the cleaned surface should be re-wet with a clean sponge cloth and warm water to remove all residues of cleaning agent achieve result free streaks shading.
5. Finally, wipe the cleaned area dry with a clean cotton or paper towel.
6. Depending on the result, cleaning steps 1 – 5 can be repeated

Compact Laminates – HPL

HPL tabletops are easy to clean with a damp cloth soaked with soapy water, then wipe with a clean wet cloth containing no soap to remove any soap residue, before finally drying with a clean cotton or paper towel. For more stubborn stains or marks, home type non-alkaline cleaners can be used.

Werzalit

Over 99.7% of bacteria are eliminated with a simple cleaning water and / or soap on the Werzalit range tops. For more stubborn stains you can introduce an alcohol based solvent, but ensure not to clean using any abrasives
